The Geriatric Care Manager receives inquiries from adult children or other family members (including those living at a distance from their elders), and referrals from attorneys, hospitals, nursing homes, physicians, community agencies, employee assistance programs, and the general public.

Throughout the elder care process, many find it helpful to bring in a professional with expertise in senior care issues. A Geriatric Care Manager specializes in assisting older people and their families with long-term care arrangements. Private care managers remain independent from the resources they recommend in order to provide an unbiased assessment of the situation.

We can help you meet the challenges of long distance caregiving, put together a comprehensive plan for present or future needs, provide extra assistance for relocation, or monitor your relative during your vacation.

The Mid Atlantic Chapter covers the states of Delaware, Maryland, Pennsylvania, District of Columbia, Virginia and West Virginia.
