## Age in Action: Medications as a Risk Factor in Falls

**Age in Action** is published jointly by the Virginia Center on Aging, VCU Gerontology, and the Virginia Department for Aging and Rehabilitative Services. Its target audience includes professionals in the field of aging, gerontologists, geriatricians, health professionals and administrators, adult home and community professionals, students, and others interested in aging-related education and research in the Commonwealth of Virginia.

The newsletter includes articles from the collaborating organizations; profiles of professionals, organizations, or businesses in the field of aging; articles on topics of relevance, such as housing, health, guardianship, educational programs, legislative issues, available resources, etc.; updates on activities and organizations in or related to the field of aging; notices of meetings and conferences; and more. The newsletter welcomes input and submissions from its readers.

The Age in Action [Medications as a Risk Factor in Falls newsletter](#) explores how medications can be a risk factor in falls for older adults with or without Intellectual Disabilities. Includes steps to improve the appropriateness of medication regimens to help reduce the risk for falls.
